

ChargeHive

UrbanCart

Emergency Roadside Assistance Collaboration

Mobile EV support powered by physical response + digital infrastructure

CONNECTED
SUPPORT NETWORK

PRESENTATION OVERVIEW

The Opportunity

A smarter roadside-support model for EV users

UrbanCart

Provides the physical mobile response unit for on-ground EV assistance.

ChargeHive EV

Provides the digital infrastructure — customer requests, ERA visibility, workflow, and status tracking.

The Result

A connected emergency support system that makes EV assistance faster, clearer, and more organised.

Physical response + digital infrastructure = **better EV roadside support**

How the ERA Request Works

Simple customer-to-service workflow

Partner-Controlled Order Flow

ChargeHive shows the order. The partner decides what happens next.

ChargeHive does not manually choose or assign jobs.

We provide the workflow, visibility, and order infrastructure.

Who Does What

UrbanCart

Provides the physical mobile service unit

Operates the on-ground response

Manages internal assignment or Open Orders release

Defines service availability and response coverage

ChargeHive EV

Shows ERA requests inside the platform

Provides digital order visibility and workflow

Supports status tracking and operator infrastructure

Enables branded service presence inside ChargeHive EV

UrbanCart handles the physical response. ChargeHive powers the digital support layer.

ChargeHive

UrbanCart

Dedicated UrbanCart Presence

UrbanCart should not appear as just another provider
