DISCUSSION PROPOSAL

CHARGEHIVE EV x URBANCART MOBILITY

Mobile EV Charging + Emergency Roadside Assistance (ERA)

Connecting UrbanCart's mobile service platform to ChargeHive's digital ERA request and partner-controlled dispatch infrastructure.

ERA-ONLY COLLABORATION

The opportunity: UrbanCart can bring the physical charging/service capability to the stranded EV. ChargeHive EV can capture the customer request and location, surface the ERA order, and provide the digital workflow for UrbanCart to assign or open the job to its dispatch network.

THE PARTNERSHIP IN ONE VIEW

URBANCART

Physical mobile response

- Electric utility/service vehicle
- Vehicle integration and field operations
- Operator, maintenance and service availability

CHARGEHIVE EV

Digital ERA infrastructure

- Customer request + GPS location
- Partner-controlled assignment + Open Orders workflow
- Status, records and branded service access

CUSTOMER-FACING CONCEPT

UrbanCart Mobile Charging

A dedicated, recognisable UrbanCart service inside ChargeHive EV ERA - with UrbanCart branding, service description, operating zone, availability and applicable customer pricing.

UrbanCart branded

Location enabled

Partner-controlled dispatch

Digital job record

OPERATING MODEL

HOW THE SERVICE WOULD WORK

A simple digital journey for the customer, with clear hand-off to UrbanCart for the physical response.

WHAT CHARGEHIVE WILL BUILD / CONFIGURE

Customer Layer

- UrbanCart Mobile Charging / ERA service entry
- GPS and manual location capture
- Service selection and request confirmation
- Customer-visible request status

Order & Dispatch Workflow

- Incoming ERA orders surfaced to the relevant partner workflow
- Partner admin / sales team can assign a specific dispatcher or operator
- Jobs can be placed in Open Orders for eligible dispatchers / partners to claim
- En-route, service-start and completion statuses

Partner Layer

- UrbanCart logo, service name and service description
- Coverage area, availability and customer-facing service information
- Dedicated partner presentation rather than a generic provider listing

Operations Layer

- Provider/operator access
- Job history and completed-request records
- Basic admin visibility for service zones, operators and requests
- Support for agreed billing / reconciliation workflow

Important: ChargeHive provides the digital ERA request and workflow infrastructure; ChargeHive does not manually choose or assign UrbanCart jobs UrbanCart / its authorised

ROLES & BRANDED EXPERIENCE WHO DOES WHAT

Clear responsibility keeps the partnership simple and prevents either company from having to rebuild the other's core capability.

URBANCART	CHARGEHIVE EV
Vehicle & field operations Provide the mobile vehicle/platform, operator, service availability, maintenance and on-road service execution.	Customer & digital operations Provide ERA access, location capture, request intake, partner-controlled assignment / Open Orders workflow, branded partner presence, operator tools, request status and completed-job records.
Own service delivery & dispatch decisions Define what the UrbanCart unit can deliver, when it is available and the operating radius. UrbanCart / its authorised team decides whether each job is directly assigned or opened for eligible dispatchers / partners to claim.	Surface demand + provide workflow Capture eligible ERA requests and surface them in the relevant partner workflow. ChargeHive provides the tools for direct assignment or Open Orders, while the partner controls the actual dispatch decision.

DEPLOYMENT CHOICES

PILOT FIRST - OR DEPLOY AT SCALE

Both models use the same core ERA workflow. The difference is operating scale, number of units and rollout commitment.

OPTION A - PILOT DEPLOYMENT

Best for validating the operating model with real customer requests.

- 1 city / defined service zone
- 1-3 UrbanCart units depending on availability
- Focused initial service: emergency/mobile EV charging
- Dedicated UrbanCart branding inside ChargeHive ERA
- Operator onboarding + partner-controlled assignment / Open Orders workflow
- Suggested validation window: 30-60 days after go-live

Primary objective: prove demand, response time, completion, utilisation and service economics before scaling.

OPTION B - FULL DEPLOYMENT

Best when UrbanCart is ready for a broader operational rollout.

- Multiple vehicles / operators
- Multiple service zones or cities
- Centralised ChargeHive ERA request intake + partner-controlled dispatch workflow
- Dedicated UrbanCart service category and branding
- Partner-managed assignment, Open Orders and operator availability
- Expansion to fleet, dealership and other agreed ERA segments

Primary objective: build a repeatable UrbanCart mobile-EV-assistance network powered by ChargeHive's digital infrastructure.

PROPOSED IMPLEMENTATION

PHASE 1

Define

Confirm service use case, vehicle configuration, customer price, operating radius and service hours.

PHASE 2

Configure

Set up UrbanCart branding, coverage, operator access, request type, direct-assignment / Open Orders workflow and service statuses inside ChargeHive.

PHASE 3

Launch

Activate the agreed zone, run live requests, support operator workflow and capture service outcomes.

PHASE 4

Review & Scale

Review demand and unit economics; expand hours, zones, vehicles or cities only where the data supports it.

WHAT WE SHOULD MEASURE

Request Volume

Acceptance & Completion

Average Response Time

Vehicle Utilisation

Service Economics

Average Distance / Job

Energy Delivered / Job

Repeat Demand by Zone

Customer Feedback

Scale decision: The collaboration does not need to start nationwide The same infrastructure

COMMERCIAL APPROACH & NEXT STEPS

SIMPLE COMMERCIAL MODEL

Low fixed platform cost per successfully completed order.

The intent is to keep the ChargeHive infrastructure cost predictable and transaction-linked while UrbanCart / the service operator controls the customer-facing service price and the economics of the physical service.

Proposed commercial principles

- ChargeHive fee linked to successfully completed ERA orders
- UrbanCart / operator sets the end-customer service price
- Service payment can remain directly with the service operator
- No percentage commission on UrbanCart's full service value under the proposed fixed-fee structure

Special innovation-partner treatment

- UrbanCart's mobile-charging model would be treated differently from a conventional full-size towing / roadside provider.
- ChargeHive can offer a lower fixed completed-order platform fee to support early deployment and validation.
- Exact commercial terms can be finalised after pilot vs full deployment, coverage and service scope are agreed.

WHAT WE NEED TO AGREE BEFORE GO-LIVE

SERVICE

First service scope: emergency charging only, or additional agreed EV roadside support.

OPERATIONS

City/zone, radius, service hours, number of units, operators and dispatch rules.

CUSTOMER

UrbanCart service name, branding, customer-facing description, service price and support process.

COMMERCIAL

Pilot or full deployment, fixed completed-order platform fee, billing cycle and any agreed limited-area structure.

PROPOSED NEXT STEP

1

Let's have a chat

Align on the ERA concept, preferred deployment approach and first service area.

2

Select deployment model

Choose Pilot or Full Deployment and define the first operating zone.

3

Configure & launch

ChargeHive configures the ERA request, assignment/Open Orders workflow and UrbanCart-branded experience.
